

# Choose your level of security.

EDUCATION, HEALTHCARE, OFFICE, AND OTHER COMMERCIAL BUILDING MANAGERS ARE BECOMING MORE AND MORE AWARE OF THE RISKS ASSOCIATED WITH A LACK OF KEY CONTROL.

Facility managers are tasked with knowing who has access to each area of their facility. Lost or unreturned keys, too many duplicate keys in circulation, changes in tenants or personnel, inadequate key holder records, and aging key systems all make this task increasingly challenging. In response to these security concerns, Schlage now offers four levels of key control that let you choose the security option that fits your needs and your budget.

If you are expanding a Schlage Classic key system or have an application that does not require key control, Schlage's Classic key system provides a basic level of security to meet your needs. Everest Open systems offer a security upgrade at a price comparable to our unpatented Classic cylinders by providing keys that can only be duplicated by commercial locksmiths or security dealers. For a modest upcharge, Everest Restricted key systems give you physical control of your key blanks, which means you have control of key duplication for even greater security.

Classic Primus and Everest Primus offer the highest level of security, whether you are looking for an economical way to upgrade an existing Schlage key system or you need pick-resistant cylinders and keys with geographic exclusivity. Everest Primus is recommended over Classic Primus for new key systems because of its stronger keys, longer patent life and more robust design.

**EVEREST**  
RECOMMENDED FOR  
NEW KEY SYSTEMS

**CLASSIC**  
RECOMMENDED FOR  
EXISTING KEY SYSTEMS

**EVEREST**  
**PRIMUS**  
**PATENTED**

**High Security**  
Exclusive Key blanks with  
tight key duplication controls.  
Pick resistant cylinders.

**PRIMUS**  
**PATENTED**

**EVEREST**  
**RESTRICTED**  
**PATENTED**

**Restricted Security**  
Restricted Key blanks with  
moderate key duplication controls.

**EVEREST**  
**OPEN**  
**PATENTED**

**Standard Security**  
Key blanks that can only be  
duplicated by commercial  
locksmiths or security dealers.

**Basic Security**  
Keys easily duplicated at home  
centers, mall stands, or by  
locksmiths.

**CLASSIC**  
**OPEN**  
**UNPATENTED**

## THE NEW STANDARD FOR KEY CONTROL

### EVEREST STANDARD SECURITY

For the same price as Schlage's Basic Security cylinders, you can now step up to Everest Standard Security. Standard security keys can be stocked and freely duplicated, but only by commercial locksmiths and security dealers. This upgrades the standard for commercial systems by eliminating many of the residential points of sale where people often go to have a duplicate key made without your consent.

#### **Everest Standard Security Features**

- Keys can be stocked and duplicated by commercial locksmiths and security dealers only
- Schlage quality nickel silver keys
- 15% thicker keys for additional strength
- Available to fit many competitors' locksets
- Legally controlled distribution through utility patent coverage through July 2014

### EVEREST RESTRICTED SECURITY

Everest Restricted Security key systems provide control of key duplication at a mid-price point between standard security and high security key systems. With Everest Restricted Security key systems, you provide Schlage with a letter of authorization and Schlage drop ships key blanks directly to the address you specify. Restricted keyways are randomly assigned and controlled via an ID code stamped on the keys. By giving you control of the keys blanks, you control who gets duplicates.

#### **Everest Restricted Security Features**

- Restricted distribution of key blanks; shipment from Schlage requires a letter of authorization
- Restricted keys are stamped with a facility ID code that enables Schlage to trace unauthorized keys to their origin and take legal action against unauthorized duplication
- Substantial key control at a mid-price point between Standard Security and High Security
- Available in Small Format Interchangeable Cores (SFIC) to retrofit Best and its clones
- Manufacture and distribution legally backed by multiple patents until July 2014

# Now, Schlage® gives you on-the-job flexibility!

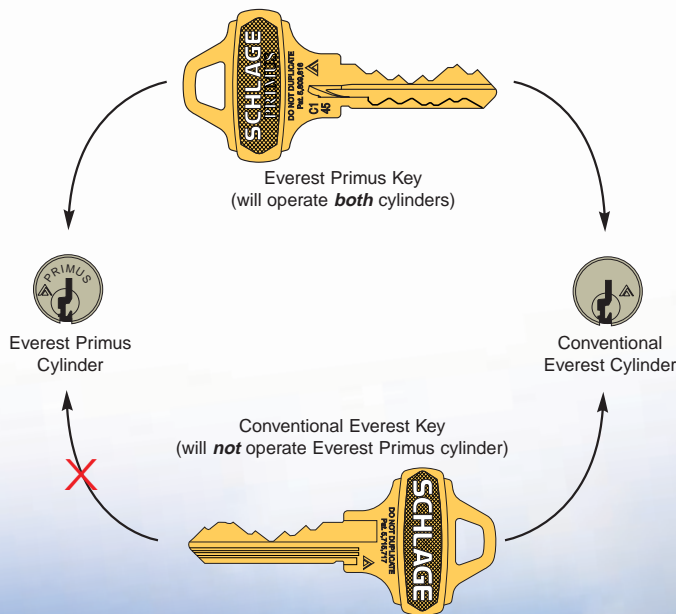

## EVEREST PRIMUS HIGH SECURITY

Customers needing geographic exclusivity on their key blanks or pick resistant cylinders should step up to an Everest Primus high security key system. Schlage uses the multiple patents on our high security cylinder to provide a legally backed guarantee of geographic exclusivity on one of the thousands of possible unique side bittings possible on our Everest Primus key blanks. Schlage utilizes a combination of a high-tech computer system and manual checks to insure that our keys are only distributed to authorized parties.

## CHOOSE THE PRODUCT THAT FITS YOUR NEEDS

Mixing and matching Primus cylinders with either Everest or Classic cylinders provides a cost-effective, flexible solution. Primus high security keys can operate either Basic, Standard, or Restricted Security cylinders. This allows interior doors or less sensitive areas to be secured with Everest or Classic cylinders and more vulnerable areas, such as exterior doors, to be protected with Primus cylinders. A single Primus key can still be used as a building master key. Since Everest and Classic keys do not operate Primus cylinders, you have an extra level of control over how much access each user has by choosing the type of key that is issued.

**Note:** Everest Primus keys are compatible with Everest C Family Open *or* Everest D Family Restricted key systems.

# Everest® completes the Schlage® product lineup.

SCHLAGE NOW OFFERS THE MOST COMPREHENSIVE RANGE OF SECURITY SOLUTIONS.

## NEW KEY SYSTEMS

For new key systems Everest provides the optimal security solution. For no additional charge over Basic Security cylinders, Schlage's Everest Standard Security cylinders limit key duplication locations to commercial locksmiths and hardware dealers. Everest Restricted Security cylinders provide an intermediate level of key control for a modest upcharge. Since Everest Primus high security cylinders can be keyed into your existing Everest Standard or Restricted Security key system, Everest products offer you the flexibility to upgrade your security without replacing all of your cylinders if unauthorized key duplication should ever become a concern. If you have a need for stringent control over who has access to your facility's keys, 100 % Everest Primus key systems will provide you with the ultimate security solution.

KEY CONTROL LEVEL:      WHAT IT IS:      WHAT IT OPERATES:

**EVEREST**  
PRIMUS  
HIGH SECURITY

- Patented key control sold with various levels of geographic exclusivity to control access to keys
- High Security – Cylinders have a second set of pins for added security & pick resistance; UL437 versions also provide drill resistance
- Keys operate High Security and either Restricted Security or Standard Security cylinders

Everest Primus keys can operate Everest keyway cylinders

**EVEREST**  
RESTRICTED SECURITY

- Key Distribution is restricted
- End users ID numbers are stamped on all keys, which enables Schlage to identify the source of any unauthorized keys
- Patented Keys are drop shipped from the factory to an end-user specified location to guarantee exclusivity
- Can be used in the same key system as Everest Primus

Everest keys cannot operate Everest Primus cylinders

**EVEREST**  
STANDARD SECURITY

- Patented Key blanks can be stocked by Commercial locksmiths and security dealers
- Keys can be duplicated without any paperwork or signature verification
- Not sold to Residential outlets
- Cylinder pricing is equivalent to Schlage's Classic (C keyway) cylinders
- Can be used in the same key system as Everest Primus cylinders

Everest keys cannot operate Everest Primus cylinders

## Existing Key Systems

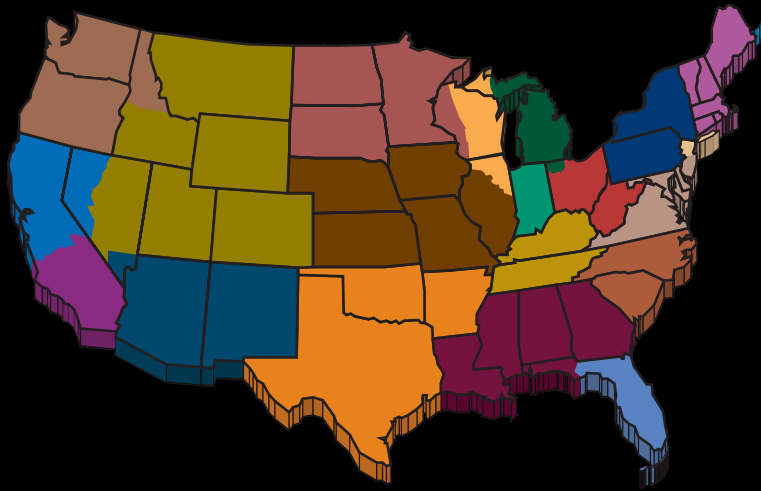

Due to the ease of key duplication with Basic Security key systems, many commercial users of these keys systems now realize that there is a potential problem with unauthorized key duplication. Classic Primus was developed to address this key control problem. If you are a commercial customer who has lost control of a Basic Security system, you can upgrade your key systems to Classic Primus to regain control without rekeying the entire facility. Due to this unauthorized key duplication concern, Schlage recommends that all unpatented key systems be upgraded to patented cylinders, or to Classic Primus cylinders on sensitive doorways.

KEY CONTROL LEVEL:	WHAT IT IS:	WHAT IT OPERATES:
 	<ul style="list-style-type: none"> <li>■ Upgrades Classic systems where key control is lost without the need to rekey, Primus keys operate both Primus and Classic cylinders</li> <li>■ Patented Key control sold with various levels of geographic exclusivity to control access to keys</li> <li>■ High Security – Cylinders have a second set of pins for added security &amp; pick resistance; UL 437 versions also provide drill resistance.</li> </ul>	<p>Primus Classic keys can operate Classic keyway cylinders.</p>
 	<ul style="list-style-type: none"> <li>■ Keys can be duplicated at most retail and commercial points of sale with no restrictions</li> <li>■ Recommended only for residential applications or existing Commercial key systems that cannot rekey.</li> <li>■ Can be upgraded to Primus without rekeying the entire facility since Primus keys operate both Classic and Primus cylinders</li> </ul>	<p>Classic keys cannot operate Primus keyway cylinders</p>

## Key Management

Schlage's Sitemaster key management system enables you to track all the keys in your system. Sitemaster helps maintain the integrity of your key system by maintaining accurate records of all keys in your system. Sitemaster comes with quick data entry and key issuance screen or can be set up to reflect your preferences and offers customized data reporting to provide precisely the information you need. Extend the life of your key system by using Sitemaster to control your key records.
