

HOW SECURE IS YOUR FACILITY?

COMMON SECURITY PROBLEMS

Because key control is essential to security, you want to protect against:

- Key holders making copies of their keys without your knowledge
- Loss of security as facility keys continue to get duplicated
- Undetected entry to sensitive areas of your facility from cylinder tampering
- Inadequate security on areas with expensive equipment, sensitive materials, or personal protection concerns

EVEREST PRIMUS FEATURES

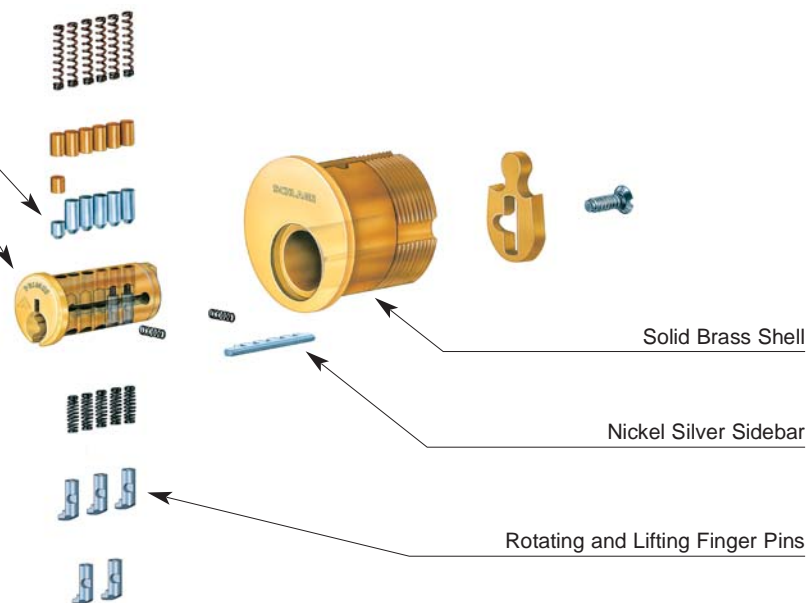

Durable Nickel Silver Bottom Pins

Solid Brass Plug

Strong Nickel Silver Key

Large key bow for stamping

Precision Side Bitting

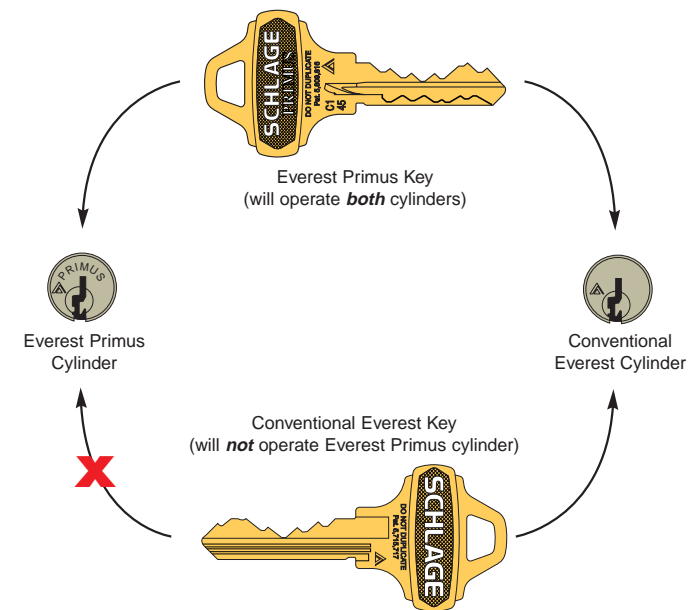

ULTIMATE SECURITY SOLUTION

The ultimate security solution is **Everest Primus!**

Everest Primus provides exceptional security by enabling you to control access to your facility. Schlage uses multiple patents on our high security keys to provide you with a legally backed guarantee of geographic exclusivity on your keys, which means that keys cannot be made for your facility without your authorization. The patented Everest Primus dual-locking mechanism provides superior pick resistance whether you choose to use High Security UL437 drill resistant cylinders, Controlled Access cylinders or a mixture of both.

FLEXIBLE COST-EFFECTIVE SECURITY SOLUTIONS

Note: Everest Primus keys are compatible with Everest C Family Open or Everest D Family Restricted key systems.

GAIN CONTROL OF YOUR FACILITY WITHOUT LOSING CONTROL OF YOUR BUDGET

The Everest product family allows you to customize the level of security in your facility. By combining the various types of patented Everest cylinders, you can tailor your security to meet your needs and your budget. Simply install conventional Everest cylinders on the unrestricted areas of your facility and use High Security UL437 and/or Controlled Access Everest Primus cylinders for the restricted areas. With a customized system, Everest Primus keyholders can be permitted access to any area of your facility while keyholders with conventional Everest keys are only permitted access to the less sensitive areas.

EVEREST PRIMUS:

- Gives you control of your key blanks so *you* determine who has keys to your facility
- Is covered by six U.S. patents that let Schlage legally manage distribution of key blanks, thereby letting *you* control key duplication
- Can be keyed into Everest Restricted or Everest Open key systems to create a cost-effective security solution tailored to meet your needs
- Leverages over 14 years of proven Primus technology
- Provides top-level security whether you choose drill-resistant UL437 or more economical non-UL cylinders
- Protects you against unauthorized key duplication by providing unique keys with multiple options for geographic exclusivity

Carmel, IN 46032

BUILDING OWNERS AND MANAGERS ARE BECOMING MORE AND MORE AWARE OF THE RISKS ASSOCIATED WITH THE LACK OF KEY CONTROL

Consult with your Schlage security professional if any of these situations sound familiar:

- Unexplained theft, break-ins, or unauthorized intruders
- Many duplicate keys in circulation
- Key systems over 7 years old
- Many lost or unreturned keys
- New construction or building remodel
- Major change in tenants or personnel
- Inadequate key holder records
- Multiple key systems needing consolidation
